

Installation and deployment of Docker

NIMISHA JAMES
RMCA-B S2
ROLL NO:11

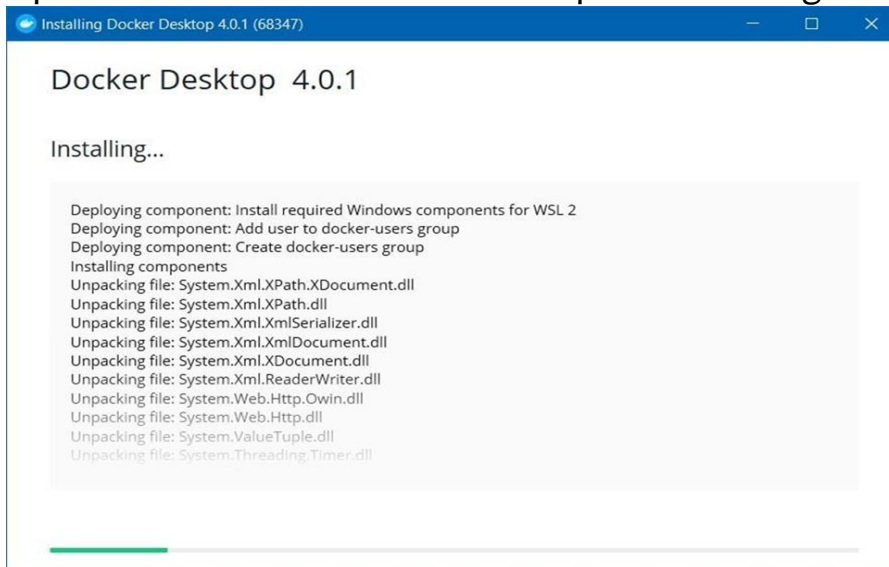

Step1

Download Docker desktop Installer for Windows from
<https://desktop.docker.com/win/main/amd64/Docker%20Desktop%20Installer.exe>

Step-II

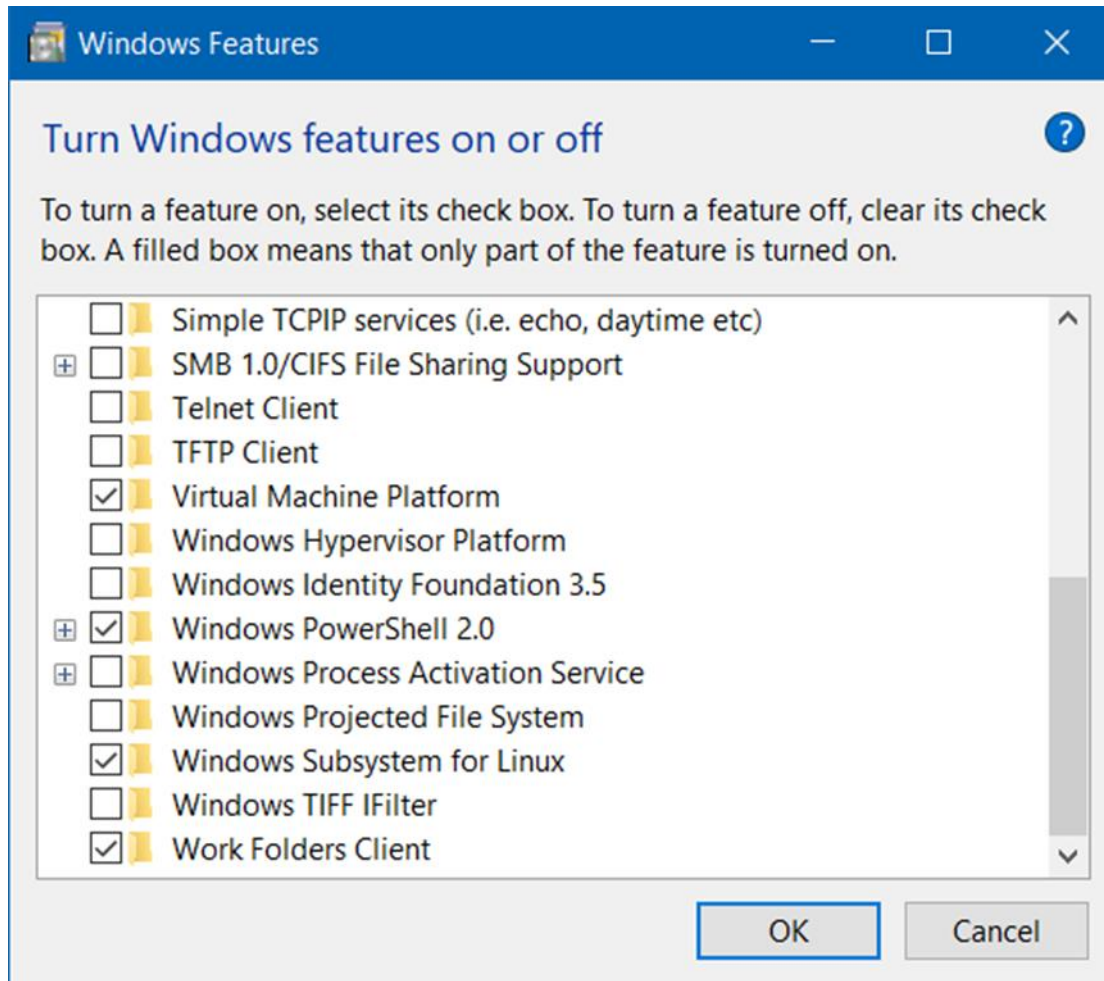

Open the .exe file and follow the steps after clicking install button.

Step-III

Once installed go to programs and features and click turn on windows features on or off

Scroll to the bottom and select windows subsystem for Linux.

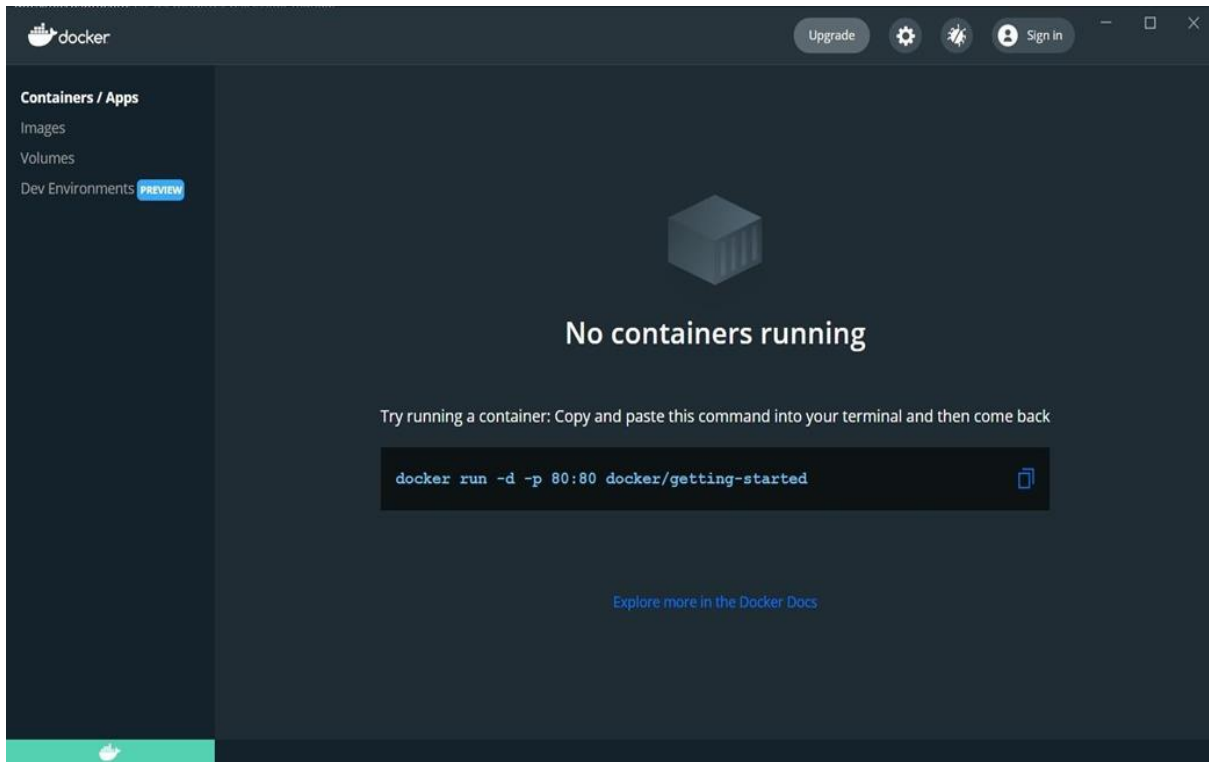

Step-IV

If any WSL 2 error occurs download windows subsystem for linux update package and install the .exe file, after the installation restart the windows device.

Step-V

Once installed, open the docker desktop app, and signin using the dockerID

Step-VI

Now pull any image from docker hub using the docker pull command in the command prompt (eg: docker pull ubuntu).

A screenshot of a Windows Command Prompt window titled "Administrator: Command Prompt". The window shows the execution of two Docker commands. The first command, "docker run -d -p 80:80 docker/getting-started", fails with an error message indicating it cannot find the image locally and that the registry-1.docker.io host is unreachable. The second command, "docker pull ubuntu", successfully pulls the latest Ubuntu image from Docker Hub, displaying the image ID, digest, and status.

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19042.1081]
(c) Microsoft Corporation. All rights reserved.

C:\Windows\system32>docker run -d -p 80:80 docker/getting-started
Unable to find image 'docker/getting-started:latest' locally
docker: Error response from daemon: Get "https://registry-1.docker.io/v2/": dial tcp: lookup registry-1.docker.io on 192
.168.65.5:53: no such host.
See 'docker run --help'.

C:\Windows\system32>docker pull ubuntu
Using default tag: latest
latest: Pulling from library/ubuntu
f3ef4ff62e0d: Pull complete
Digest: sha256:65de08a8dabf289ef114053ab32f79e0c333a4fbfa1fe3778bb13ae921a7849b
Status: Downloaded newer image for ubuntu:latest
docker.io/library/ubuntu:latest

C:\Windows\system32>
```

Now in the images tab an image of ubuntu will be displayed, we can run the ubuntuinstance using the cli.
